

Water innovation through ecosystem services, nature-based solutions and hybrid grey-green infrastructure

Joint workshop of DESSIN & WssTP
Side-event to WssTP Water Knowledge Europe 2017

The workshop "**Water innovation through ecosystem services, nature-based solutions and hybrid grey-green infrastructure**" aims at underlining how Ecosystem Services (ESS), Nature-Based Solutions (NBS) and Hybrid Grey-Green Infrastructure (HGGI) best practices, approaches and methodologies can contribute to innovation in the water sector and help tackle water-related challenges (such as water quality and water scarcity).

Participants will be there to exchange experience on implementation: success stories and success factors, barriers for implementation and how they can be overcome, as well as to identify possible ways forward for scaling up and market uptake, actions to be taken and implications for future European innovation activities in the field. **The workshop will take place in Brussels on the afternoon of 28 November, with plenary presentations on project results, and interactive discussion rounds on lessons learnt and possible ways forward to foster broad implementation of ESS, NBS, and HGGI solutions.**

The event is jointly organized by the EC funded project DESSIN: Ecosystem Services Enabling Innovation in the Water Sector (www.dessin-project.eu) and the WssTP working groups Ecosystem Services and Green Infrastructures (<http://wsstp.eu/communities/working-groups/>).
