The New European Bauhaus Facility

The New European Bauhaus (NEB) Facility is a European Commission funding instrument designed to accelerate the transformation of neighbourhoods through sustainable and inclusive design, thereby translating the European Green Deal into tangible improvements in daily life. It emphasises sustainability, high-quality design, culture, cultural heritage, inclusivity, accessibility, and affordability, while respecting Europe's diverse cultures.

The NEB Facility runs from 2025 to 2027, providing financial support and a strategic framework to achieve the NEB objectives. It is foreseen to continue beyond 2027.

The NEB Facility combines different sources of funding, anchored in the Horizon Europe Strategic Plan 2025-2027, and consists of two components:

- **Research and Innovation (R&I) Component**: supports the development of novel, including digital, solutions aligned with NEB values. It focuses on key work streams under each specific objective (Transforming places with Communities, Supporting Innovation, Enabling Change -see more details in the NEB Facility Roadmap), exploring social and societal impacts of the built environment, innovative governance, ownership of change, and social connections, while promoting innovative materials and products, sustainable design, standardisation as well as new business, project- and process design, funding models, and incentives to realise NEB projects.
- **Roll-out Component**: supports the implementation and scale-up of NEB solutions. It supports place-based projects that present various interventions such as sustainable and affordable housing, regenerative strategies for inclusive cultural heritage and public spaces, stronger local democracy, and the use of culture as a language of change. This component will also focus on skills development for sustainable construction, digitalisation, capacity-building for NEB solutions, and implementing innovative funding models.

The NEB Facility combines different sources of funding.

- The **R&I component** has an indicative budget of around EUR 120 million per year, implemented in the Horizon Europe Work Programmes for 2025-2027.
- The **Roll-out Component** is expected to leverage a similar level of investment, at least around EUR 120 million per year from other EU programmes, with additional support from national and private funding

The whole **NEB Facility Roadmap** is available HERE.

The Research and Innovation (R&I) Component

Through its **R&I component**, the NEB Facility focuses on **three major R&I themes, called Destinations**:

1. **Connecting the green transformation, social inclusion, and local democracy**
2. **Circular and regenerative approaches for the built environment**
3. **Innovative funding and new business models for the transformation of neighbourhoods**

The Horizon Europe Work Programmes dedicated to the **R&I component of the NEB Facility** are available at the following links:

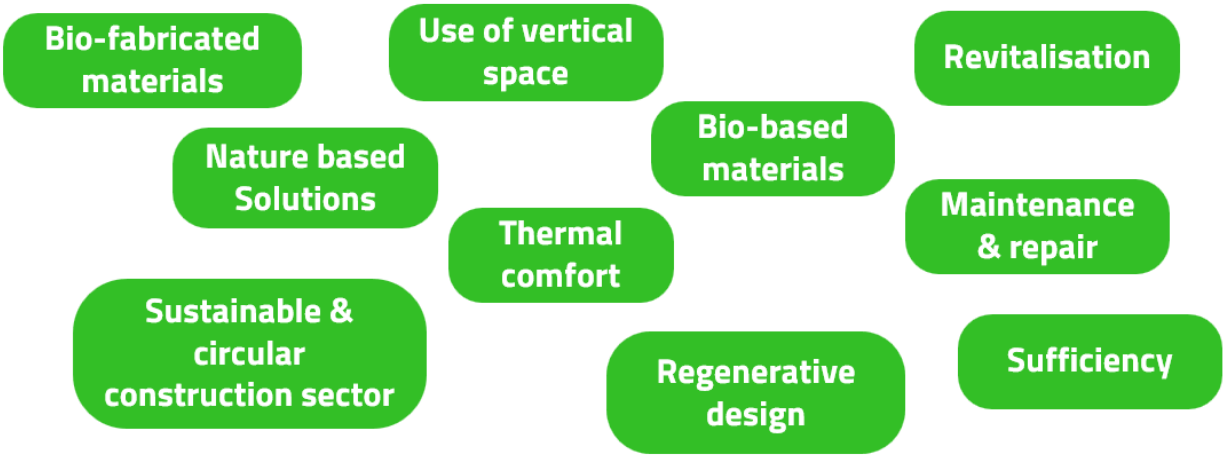

- Horizon Europe Work Programme 2025 – NEB Facility
- Horizon Europe Work Programme 2026-2027 – NEB Facility

According to these Work Programmes, which detail the R**&I topics to be funded under each Destination from 2025 to 2027**, the following topics, synthesised here in the form of **keywords**, have been or will be funded *(please refer to the Work Programmes for full description):*

2. REGEN

Circular and regenerative approaches for the built environment

3. BUSINESS

Innovative funding and new business models for the transformation of neighbourhoods
